TECHNICAL SKILLS

Programming Languages

- Python
- SQL
- R

ML Frameworks & Libraries

- Scikit-learn
- PyTorch
- TensorFlow

LLM & NLP Tools

- LLM Evaluation
- Technical Auditing
- Reasoning

Cloud & Deployment

- Remote Workflows
- Data Engineering

Databases & Data Engineering

- Golden Datasets
- Data Analysis

Web & DevOps

- Automated Testing

ML Concepts & Specializations

- Model Hardening
- Statistical Inference
- Logical Fallacies

Professional Summary

AI/ML Engineer with 2 years of hands-on experience delivering production-ready AI solutions, with a focus on LLM- and RAG-based document QA systems. Improved document QA accuracy by 20%, reduced MFA verification load by 25%, and streamlined ID authentication pipelines. Recent graduate with strong proficiency in Python, PyTorch, TensorFlow, OpenCV, and AWS, and a solid foundation in LLMs, RAG systems, model evaluation, and end-to-end ML workflows.

Education

Missouri State University Dec-2025
Master of Science in Computer Science — Data Science GPA: 3.63

Work Experience

AI/ML Engineer Jul 2023 – Dec 2023
Grootan Technologies Chennai, India

- Developed an LLM-as-Judge evaluation pipeline to identify reasoning flaws in AI outputs, ensuring high-quality 'golden' logic.
- Engineered specialized datasets for testing bias and logical consistency, directly supporting the hardening of model reasoning.
- Built self-correcting RAG systems that iteratively improved answer quality, mimicking the refinement process of an AI Trainer.
- Conducted technical auditing of ML models by implementing rigorous validation metrics (Faithfulness, Relevance).
- Designed batched query pipelines to evaluate models at scale, optimizing the feedback loop for training data generation.
- Collaborated on defining ground-truth standards for complex data science problems, enhancing model performance on technical tasks.

AI/ML Intern Sep 2022 – Jul 2023
Grootan Technologies Chennai, India

- Built a National ID authentication system for detecting counterfeit holograms using YOLO object detection, MiDaS depth estimation, and GAN-generated synthetic samples to improve robustness.
- Optimized the hologram verification pipeline by eliminating redundant processing, reducing per-card detection time from 7 minutes to 3 minutes.
- Applied transfer learning to fine-tune pre-trained models for limited datasets, achieving reliable counterfeit detection across varied hologram designs.
- Containerized and deployed solutions using Docker and AWS, ensuring scalable production-ready pipelines for anomaly detection and identity verification.

Data Science Intern Nov 2021 – Mar 2022
iNeuron.ai Bengaluru, India

- Developed an end-to-end credit card default prediction project using Docker, CircleCI, and Heroku, achieving 92% model accuracy on simulated customer transactions.
- Built a CI/CD pipeline to deploy predictive models to AWS production, enabling real-time predictions.
- Conducted exploratory data analysis on 30,000+ customer records to identify key features that improved model performance.

Personal Projects

- BioMedical Research Assistant – Multi-Agent LLM System**
Fine-tuned Llama-3.1-8B on PubMedQA using QLoRA (4-bit) and built a CrewAI-based multi-agent biomedical QA pipeline with PubMed retrieval and a Streamlit interface.
- SafeSpace 2.0 – AI Mental Health Therapist**
Built an empathetic AI mental-health agent with crisis detection and therapist recommendations using LangGraph/REAct, deployed via Streamlit and Twilio WhatsApp with real-time API integrations.
