PROFESSIONAL SUMMARY

AI/ML Engineer with 2 years of experience building LLM-RAG based document QA and production-ready AI solutions. Delivered systems that improved document QA accuracy by ~20%, reduced MFA verification load by ~25%, and optimized ID authentication pipelines, with hands-on experience in Python, PyTorch, TensorFlow, OpenCV, and AWS. Recent graduate with strong foundation in LLMs and RAG systems, model evaluation, and end-to-end ML workflows.

EDUCATION

Missouri State University
M.S. Computer Science – Data Science

GPA: 3.63
Dec 2025

TECHNICAL SKILLS

Programming Languages	Python, SQL
ML Frameworks & Libraries	PyTorch, TensorFlow, Scikit-learn
LLM & Generative AI	LangChain, LangGraph, LangSmith, LlamaIndex, RAG Systems, LLMs (Mistral, LLaMA), LoRA, QLoRA
Backend & APIs	FastAPI
Testing & Quality	Unit Testing, Integration Testing
MLOps & Monitoring	MLflow, Model Evaluation Pipelines
DevOps & CI/CD	Docker, CI/CD Pipelines
Cloud & Infrastructure	AWS
Version Control & Collaboration	Git, GitHub

WORK EXPERIENCE

AI/ML Engineer
Grootan Technologies

Chennai, India
July 2023 December 2023

- Designed, built, and maintained production-grade Python services integrating LLM-powered RAG systems, delivering end-to-end features from implementation through deployment.
- Developed clean, well-structured backend components using FastAPI, emphasizing maintainability, clear interfaces, and extensibility in production environments.
- Implemented evaluation and monitoring workflows for LLM-based systems, including LLM-as-Judge pipelines, to support continuous quality and performance improvement.
- Wrote and maintained unit and integration tests for AI-enabled services, reducing regression risk and improving overall system reliability.
- Containerized applications using Docker and supported CI/CD-driven deployments to cloud infrastructure, contributing to reliable and repeatable release processes.
- Collaborated closely with cross-functional engineering teams and participated in code reviews, adhering to modern software engineering best practices and Agile workflows.

AI/ML Intern
Grootan Technologies

Chennai, India
September 2022 July 2023

- Built a National ID authentication system for detecting counterfeit holograms using YOLO object detection, MiDaS depth estimation, and GAN-generated synthetic samples to improve robustness.
- Optimized the hologram verification pipeline by eliminating redundant processing, reducing per-card detection time from 7 minutes to 3 minutes.
- Applied transfer learning to fine-tune pre-trained models for limited datasets, achieving reliable counterfeit detection across varied hologram designs.
- Containerized and deployed solutions using Docker and AWS, ensuring scalable production-ready pipelines for anomaly detection, identity verification, and document QA systems.

Data Science Intern
iNeuron.ai

Bengaluru, India
November 2021 March 2022

- Developed an end-to-end credit card default prediction project using Docker, CircleCI, and Heroku, achieving 87% model accuracy on simulated customer transactions.
- Built a CI/CD pipeline to deploy predictive models to AWS production, enabling real-time predictions.
- Conducted exploratory data analysis on 30,000+ customer records to identify key features that improved model performance.
- Implemented data validation and preprocessing pipelines, reducing manual data preparation effort.

PERSONAL PROJECTS

Wine Quality Prediction - End-to-End MLOps Pipeline

- Built an end-to-end ML pipeline using ZenML and MLflow, deploying a REST API on AWS Lambda with Docker for automated training and inference.
- Implemented CI/CD with GitHub Actions to automate model retraining and deployment to AWS (S3, ECR, API Gateway), ensuring reliable and repeatable releases.

BioMedical Research Assistant Multi-Agent LLM System

- Fine-tuned Llama-3.1-8B using QLoRA on PubMedQA data with 4-bit quantization, gaining hands-on experience in parameter-efficient LLM training for biomedical QA.
- Built a multi-agent research workflow using CrewAI and PubMed retrieval via Model Context Protocol, with a Streamlit interface for interactive querying.

SafeSpace 2.0 AI Mental Health Therapist

- Developed an AI-powered mental health companion with empathetic conversational support, crisis detection, and location-aware therapist recommendations.
- Implemented a tool-using LLM agent (LangGraph / REAct) with multi-channel frontends (Streamlit web chat + Twilio WhatsApp) and integrated APIs for real-time actionable outputs.
