PROFESSIONAL SUMMARY

AI/ML Engineer with 2 years of experience building LLM-RAG based document QA and production-ready AI solutions. Delivered systems that improved document QA accuracy by ~20%, reduced MFA verification load by ~25%, and optimized ID authentication pipelines, with hands-on experience in Python, PyTorch, TensorFlow, OpenCV, and AWS. Recent graduate with strong foundation in LLMs and RAG systems, model evaluation, and end-to-end ML workflows.

EDUCATION

Missouri State University
M.S. Computer Science – Data Science

GPA: 3.63
Dec 2025

TECHNICAL SKILLS

Programming Languages	Python, C++
ML Frameworks & Libraries	PyTorch, TensorFlow, OpenCV
LLM & NLP Tools	Vision-Language Models (VLA), LLMs
Cloud & Deployment	AWS, SageMaker
Databases & Data Engineering	Synthetic Data, Simulation
Web & DevOps	ROS/ROS2, Docker
ML Concepts & Specializations	Robotics Perception, Multi-modal AI, Model Validation

WORK EXPERIENCE

AI/ML Engineer
Grootan Technologies

Chennai, India
July 2023 - December 2023

- Designed robust evaluation pipelines (LLM-as-Judge) to assess model performance, a methodology transferable to evaluating VLA models.
- Built hybrid retrieval workflows combining signals, analogous to fusing multi-modal data for perception tasks.
- Implemented anomaly detection systems for verification, demonstrating strong capability in identifying out-of-distribution events.
- Optimized inference pipelines through batched processing, essential for efficient real-time robotic perception.
- Deployed Python-based solutions on AWS, supporting the infrastructure needed for cloud-based robot learning workflows.
- Collaborated with cross-functional teams to validate model reliability in production settings, ensuring safety and accuracy.

AI/ML Intern
Grootan Technologies

Chennai, India
September 2022 - July 2023

- Built a National ID authentication system for detecting counterfeit holograms using YOLO object detection, MiDaS depth estimation, and GAN-generated synthetic samples to improve robustness.
- Optimized the hologram verification pipeline by eliminating redundant processing, reducing per-card detection time from 7 minutes to 3 minutes.
- Applied transfer learning to fine-tune pre-trained models for limited datasets, achieving reliable counterfeit detection across varied hologram designs.
- Containerized and deployed solutions using Docker and AWS, ensuring scalable production-ready pipelines for anomaly detection, identity verification, and document QA systems.

Data Science Intern
iNeuron.ai

Bengaluru, India
November 2021 - March 2022

- Developed an end-to-end credit card default prediction project using Docker, CircleCI, and Heroku, achieving 87% model accuracy on simulated customer transactions.
- Built a CI/CD pipeline to deploy predictive models to AWS production, enabling real-time predictions.
- Conducted exploratory data analysis on 30,000+ customer records to identify key features that improved model performance.
- Implemented data validation and preprocessing pipelines, reducing manual data preparation effort.

PERSONAL PROJECTS

Wine Quality Prediction - End-to-End MLOps Pipeline

- Built an end-to-end ML pipeline using ZenML and MLflow, deploying a REST API on AWS Lambda with Docker for automated training and inference.
- Implemented CI/CD with GitHub Actions to automate model retraining and deployment to AWS (S3, ECR, API Gateway), ensuring reliable and repeatable releases.

BioMedical Research Assistant - Multi-Agent LLM System

- Fine-tuned Llama-3.1-8B using QLoRA on PubMedQA data with 4-bit quantization, gaining hands-on experience in parameter-efficient LLM training for biomedical QA.
- Built a multi-agent research workflow using CrewAI and PubMed retrieval via Model Context Protocol, with a Streamlit interface for interactive querying.

SafeSpace 2.0 - AI Mental Health Therapist

- Developed an AI-powered mental health companion with empathetic conversational support, crisis detection, and location-aware therapist recommendations.
- Implemented a tool-using LLM agent (LangGraph / REAct) with multi-channel frontends (Streamlit web chat + Twilio WhatsApp) and integrated APIs for real-time actionable outputs.
