

Sujan Dora

AI Engineer

(940) 843-0811 | sujanworkofficial@gmail.com | [LinkedIn](#) | [Portfolio](#) | Springfield, MO, USA (Open to Relocate)

PROFESSIONAL SUMMARY

AI Software Engineer with 2 years of experience designing, deploying, and maintaining production-grade Python applications on AWS, integrating AI/ML capabilities into scalable backend systems. Delivered measurable impact by improving document QA accuracy by 20%, reducing MFA verification load by 25%, and optimizing identity authentication pipelines. Strong background in software engineering fundamentals, CI/CD, Docker, cloud-native architectures, and system reliability, with applied experience in NLP, computer vision, and model evaluation.

EDUCATION

Missouri State University
M.S. Computer Science – Data Science

GPA: 3.63
Dec 2025

TECHNICAL SKILLS

Programming Languages	Python, SQL, R
ML Frameworks & Libraries	PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy
LLM & NLP Tools	LangChain, LLM Evaluation, Data Pipelines
Cloud & Deployment	AWS, Spark, Hadoop
Databases & AI Infrastructure	PostgreSQL, Data Lakes
Web & DevOps	Git, CI/CD
ML Specializations	Supervised Learning, Unsupervised Learning, Deep Learning, Statistical Inference

WORK EXPERIENCE

AI/ML Engineer
Grootan Technologies

Chennai, India
July 2023 December 2023

- Developed rigorous ground-truth solutions for complex data science problems, auditing AI-generated code to ensure 100% technical accuracy and logical soundness.
- Engineered advanced evaluation pipelines for LLM reasoning capabilities, identifying and mitigating logical fallacies such as data leakage and overfitting.
- Designed and implemented robust data engineering workflows using Python and Spark, optimizing data processing for large-scale machine learning datasets.
- Conducted in-depth statistical analysis and hypothesis testing to validate model performance, documenting failure modes to drive iterative model hardening.
- Architected automated testing frameworks for checking code syntax and mathematical validity of AI outputs, significantly reducing manual review time.
- Collaborated with research teams to refine ‘chain-of-thought’ reasoning in language models, enhancing their ability to solve complex algorithmic challenges.

AI/ML Intern
Grootan Technologies

Chennai, India
September 2022 July 2023

- Designed, implemented, and maintained a production-grade Python backend system for national ID authentication, integrating computer vision and ML components into a reliable, scalable service.
- Optimized the end-to-end verification workflow by removing redundant processing, reducing per-request latency from 7 minutes to 3 minutes and significantly improving system throughput.
- Applied transfer learning to adapt pre-trained models for limited datasets, improving detection accuracy and robustness across diverse hologram designs in production environments.
- Containerized and deployed backend services using Docker and AWS, enabling scalable, maintainable, and production-ready pipelines with automated build and deployment workflows.

Data Science Intern
iNeuron.ai

Bengaluru, India
November 2021 March 2022

- Developed an end-to-end credit card default prediction project using Docker, CircleCI, and Heroku, achieving 87% model accuracy on simulated customer transactions.
- Built a CI/CD pipeline to deploy predictive models to AWS production, enabling real-time predictions.
- Conducted exploratory data analysis on 30,000+ customer records to identify key features that improved model performance.

PERSONAL PROJECTS

Wine Quality Prediction - End-to-End MLOps Pipeline

- Built an end-to-end ML pipeline using ZenML and MLflow, deploying a REST API on AWS Lambda with Docker for automated training and inference.
- Implemented CI/CD with GitHub Actions to automate model retraining and deployment to AWS (S3, ECR, API Gateway), ensuring reliable and repeatable releases.

BioMedical Research Assistant Multi-Agent LLM System

- Fine-tuned Llama-3.1-8B using QLoRA on PubMedQA data with 4-bit quantization, gaining hands-on experience in parameter-efficient LLM training for biomedical QA.
- Built a multi-agent research workflow using CrewAI and PubMed retrieval via Model Context Protocol, with a Streamlit interface for interactive querying.

SafeSpace 2.0 AI Mental Health Therapist

- Developed an AI-powered mental health companion with empathetic conversational support, crisis detection, and location-aware therapist recommendations.
- Implemented a tool-using LLM agent (LangGraph / REAct) with multi-channel frontends (Streamlit web chat + Twilio WhatsApp) and integrated APIs for real-time actionable outputs.
